Not only will it fix the alignment issue, it will make your design feel more consistent, too.

Right-align numbers

If you're designing a table that includes numbers, right-align them.

SYMBOL	PRICE	CHG	MKT CAP
APPL	\$174.72	-1.97	1,007T
GOOGL	\$1,068.73	+17.91	\$74.4B
AMZN	\$1,699.19	+30.79	\$30.9B
ASFT	\$1,699.19	+0.67	\$38.2B

AMZN	\$1,699.19	+30.79	\$30.9
ASFT	\$1,699.19	+0.67	\$38.2

When the decimal in a list of numbers is always in the same place, they're lot easier to compare at a glance.

Hyphenate justified text

Justified text looks great in print and can work well on the web when you going for a more formal look, but without special care, it can create a lot awkward gaps between words:

I recently set out to implement user registration for a project I'm working on in Elixir/Phoenix. It wasn't long before I encountered a challenge that I have stumbled upon with every other ORM library: accepting a collection of form inputs and saving it across multiple (related) records in the database.
